

ADFORGE AI - AUTOMATED MULTI-PLATFORM COPY SYSTEM

Project Empathy Map Document

Date: 7th July 2026

Maximum Marks: 4 Marks

Development Profile: Sunehri Sharma

Project Name: AdForge AI - Automated Multi-Platform Copy System

Empathy Map Blueprint

Target User Persona: Sarah (Small Business Owner & Digital Marketer)

Core Problem Addressed: The exhausting, time-consuming process of manually writing, formatting, and adjusting marketing copy to meet strict, varying platform constraints (Instagram hashtags, Google text headers, Facebook body styles).

SAYS

- "I waste hours rewriting and re-formatting the exact same ad pitch over and over just to fit Instagram, Facebook, and Google Ads guidelines."
- "I need a single platform that can instantly generate high-converting copy pre-loaded with styled hashtag pills and contextual emojis."
- "Hiring an agency or professional copywriter is way too expensive for my budget."

THINKS

- "Will this AI platform actually understand my specific brand tone, or will it sound completely generic and robotic?"
- "If I can rapidly test multiple copy variations per campaign, my click-through rates (CTR) and conversions should skyrocket."
- "I hope this system automates my workflows enough so I can focus on scaling up actual product operations instead of writing text panels."

DOES

- Manually switches across multiple open browser tabs to test character constraints and format spacing layout boxes.
- Copies, pastes, and re-edits previous high-performing ad briefs to use as raw template blocks for new platform submissions.
- Spends weekends brainstorming fresh hooks, engaging body captions, and digging up optimized industry hashtags.

FEELS

- Overwhelmed by the relentless daily demand to pump out fresh creative copy variants to avoid campaign ad-fatigue.
- Anxious about burning limited marketing spend on unoptimized, unengaging copy lines that fail to convert traffic.
- Relieved and Empowered when a smart full-stack generator engine renders multi-platform options on a single dark-themed workspace click.

Empathy Map Matrix Breakdown

1. SAYS (Explicit Needs)

- Expresses frustration with cross-platform formatting rules, character counts, and layout constraints.
- Demands an easy-to-use user interface that delivers structured outputs natively rather than basic blocks of unparsed plain text.

2. THINKS (Internal Motivations)

- Wonders how to safely scale marketing volume without diluting the unique identity or tone of the brand.
- Values rapid iteration capabilities, wanting to experiment with multiple visual variants (Professional, Luxury, Playful tones) instantly.

3. DOES (Observed Behaviors)

- Sifts through old documents and templates to stitch together working copy layouts by hand.
- Spends excessive administrative hours preparing textual assets instead of designing high-level campaign strategies.

4. FEELS (Emotional Drivers)

- Stressed about the risk of wasting capital on low-converting ad campaigns.
- Excited about the potential of leveraging localized AI systems (like the LLaMA 3.3 production mirror) to eliminate copywriting bottlenecks.
