

• ADFORGE AI — PROJECT DOCUMENTATION

Problem-Solution Fit Canvas

- **Date:** 7th July 2026
- **Development Profile:** Sunehri Sharma
- **Maximum Marks:** 5 Marks

Proposed Canvas Content

1. Customer Segment(s) [CS]

- Solo e-commerce store founders, independent digital marketers, and freelance creators who manage and execute advertising campaigns across multiple platforms.

2. Problems/Pains + Its Frequency [PR]

- **Pains:** Manually drafting and re-formatting creative copy to fit strict, varying platform rules (e.g., Google character limits, Instagram hashtag limits, Facebook social proof spacing).
- **Frequency:** Daily/weekly, occurring every single time a new product launches or a campaign variation is tested.

3. Triggers to Act [TR]

- Launching a new product line (e.g., wireless earbuds), kicking off a high-stakes flash sale, or noticing high ad fatigue and dropping click-through rates (CTR) on current campaigns.

4. Emotions Before/After [EM]

- **Before:** Overwhelmed, anxious about wasting ad spend, and deeply frustrated by tedious cross-tab formatting tasks.
- **After:** Relieved, highly productive, and confident that the output complies with platform constraints.

5. Available Solutions + Pros & Cons [AS]

- *Manual Copywriting Agency:* **Pros:** High quality and unique. **Cons:** Extremely expensive with slow turnaround times.
- *Generic AI Chat Tools:* **Pros:** Free/cheap and instant. **Cons:** Robotic tone, frequently violates character limits, and outputs raw, unformatted text blocks.

6. Customer Limitations [CL]

- Extremely tight marketing budgets (cannot afford professional agencies) and lack of specialized copywriting teams, relying purely on basic local browsers to run marketing tools.

7. Behavior + Its Intensity [BE]

- **Behavior:** Sifting through old documents, manual character counting, and copywriting by hand in Google Docs.
- **Intensity:** High (consuming up to 50% of active campaign setup time).

8. Channels of Behavior [CH]

- **Online:** Facebook and Google ad managers, browser tab character counters, and local copy-paste scratchpads.
- **Offline:** Hand-written brainstorming notebooks.

9. Problem Root / Cause [RC]

- Social and search networks enforce completely different layout layouts and character boundaries to optimize their own platforms, with no unified system to auto-adapt a single product brief for all channels.

10. Your Solution [SL]

- **AdForge AI:** A unified Flask-based micro-workspace using Groq's LLaMA 3.3 model to instantly transform a single product brief into character-compliant, tone-adaptive ad copies, slogans, and A/B suggestions.
