- **Maximum Marks:** 3 Marks

Proposed AI Prompt Logs Matrix

S.No	Task / Intent	System Prompt & Context	Exact User Prompt	AI Output Summary	Refinements / Iterations
1	Generate Frontend UI Boilerplate	Act as an expert frontend developer. Use HTML, CSS, and Vanilla JavaScript.	"Create a responsive dark-themed glassmorphic web interface with input forms for product details, checkboxes for platforms (Google, FB, Insta), and a tone selector grid."	Provided a clean HTML layout with CSS variables and glassmorphism styling for the workspace dashboard.	Needed to prompt again to add a specific visual loading animation state while waiting for the API.
2	Backend API Route Construction	Act as a senior Python backend engineer. Use Flask and the Groq SDK.	"Write a Flask /api/generate route that takes a JSON payload, securely reads the Groq API key from a .env file, and sends the prompt to the	Generated the app.py boilerplate with the required route, dotenv setup, and standard error handling.	Prompted again to enforce that the route forces the AI's response to be strictly formatted as a JSON object.

			LLaMA 3.3-70B model."		
3	Core LLM Prompt Engineering	Act as a master copywriter and AI prompt engineer.	"Write a system prompt that forces an LLM to output 3 distinct ad variants (Google, Facebook, Instagram). Google headlines MUST be under 30 characters. Output strictly in JSON."	Delivered a highly structured system prompt template utilizing JSON schemas and character constraint rules.	Refined the prompt to explicitly block the AI from wrapping the JSON in markdown code blocks to prevent parsing errors.
4	Refinement Loop Feature Logic	Act as a full-stack developer. Context: Flask backend, JS frontend.	"How do I implement an asynchronous refinement loop where a user can input a tweak like 'make it funnier' and update only the specific generated ad card using the Fetch API?"	Provided the JavaScript Fetch function and the corresponding Flask route for handling follow-up conversation prompts.	Adjusted the JS code slightly to target specific DOM elements by ID for seamless in-place text replacement.
5	Documentation Layout	Act as a skilled	"Convert my project details	Generated clean, print-	Instructed the AI to remove
