

• **ADFORGE AI — PROJECT DOCUMENTATION**

• **AI Tools Used Report**

- **Date:** 7th July 2026
- **Development Profile:** Sunehri Sharma
- **Maximum Marks:** 2 Marks

Proposed AI Tools Matrix

S.No	Tool / Platform Name	Specific Use Case / Application	Project Phase Applied	Impact / Benefit
1	Groq Cloud API (LLaMA 3.3-70B model)	Serving as the core operational intelligence engine to process structured product briefs, enforce character constraints, and generate multi-platform ad copies.	Core Production & Deployment Phase	Enabled sub-3-second, ultra-low latency text generation with highly accurate, conversion-focused marketing output layouts.
2	Gemini / Advanced LLM Assistant	Generated backend micro-framework boilerplate code, designed structured JSON schema prompts, and outlined the glassmorphism UI/UX layout.	Initialization & Architecture Design Phase	Accelerated the initial full-stack app configuration, environment parsing, and layout setup by roughly 50%.
3	GitHub Copilot	Provided inline syntax auto-completion for JavaScript Fetch API requests, DOM string rendering, and async clipboard triggers.	Active Development & Coding Phase	Eliminated syntax troubleshooting delays and optimized client-side interactivity handlers in real-time.
